CARESCAPE Ventilator R860

EXHALATION VALVE

The flow sensor is one of the most important components of your critical care ventilator. It automatically checks patient airway flow and pressure 250 times per second, making it the "eye" of your ventilator.

The CARESCAPE™ R860 flow sensor and exhalation valve assembly (EVA) are available in both single patient use and reusable options.

SINGLE PATIENT USE

Infection control - single patient use accessories may help reduce the risk of cross-contamination and help lower the risk of costly ventilator associated infections

Workflow efficiency - no sterilization or assembly required, which could lead to time and cost savings

BREATHING MASKS

Breathing masks are designed to channel gas mixtures to the patient for manual non-invasive ventilation via the mouth and nose. Breathing Masks from GE Healthcare are tested and verified to function with GE Healthcare ventilators. The products perform optimally with GE Healthcare breathing systems when applicable.
